

B-axis turning

Specification: Turning with active B-axis

Description:

Additional module for the programming of the B-axis

- Graphic interactive determination of the setting angle via slide controller
- Generation of the tool paths
- Interpolating of the contour traversing in the simulation

Benefit:

- Simple continuous setting of the B-axis for optimal cutting results
- Direct optic collision control during the programming
- Control of the setting angle during the simulation

Requirements:

- EXAPTplus as of version 5.01
