

Fair Review EMO 2011

EXAPT – The next generation of CAD/CAM

At the end of the EMO 2011, the world-wide leading fair of the machine tool industry, also the EXAPT Systemtechnik GmbH draws an extremely positive conclusion.

Dipl.-Ing. Rolf Schneider, sales manager of the EXAPT Systemtechnik GmbH: „The EMO in Hanover has expanded its position as world-wide leading fair for metal working with its perfect flow and has been proved as innovative pointer for the branch. The quality of the visitors was very good; a concrete interest in investments exists. We are very optimistic that a good post-fair business will result from the many specific inquiries.

There was a particular demand for the EXAPT core competence in the metal-cutting processes turning, drilling and milling and the CAD/CAM solutions in a new "look and feel". The new web-based shopfloor communication and the simulation with machine environment attracted the visitors as well as the 3-5-axis simultaneous machining on modern machining centres for turning/milling operations.

The visitors were impressed of the next generation of the EXAPT CAD/CAM systems. In addition to the internet-based manufacturing communication the compound use with devices of our partners, e.g. the vendor for automatic tool dispenser Achterberg and the specialist for presetting and measuring machines Zoller, was the big hit.
